COMMUNICATIONS AUTHORITY OF THAILAND CHOOSES RADVISION VIDEOCONFERENCING PLATFORM

Leading Telecom Standards Authority and Service Provider in Thailand Picks RADVISION to Power Managed Videoconferencing Service and Interoffice Communications

Glen Rock, New Jersey, April 24, 2003 -- RADVISION (Nasdaq: RVSN) today announced that the Communications Authority of Thailand (CAT) chose RADVISION's leading viaIP 400 platform to provide managed video telephony conferencing services to their customers as well as videoconferencing between CAT's various corporate offices. The contract was secured and integrated by Telesat Corporation Co., Ltd., a leading Thai networking provider of visual communications solutions throughout the region.

In addition to being the leading telecommunications provider in Thailand, CAT (www.cat.or.th) also plays an important role as the government's official source for testing and approval of advanced telecommunications systems. With this relationship, CAT provides a powerful reference for RADVISION technology and products and Telesat's continuing sales efforts in the region.

"When we began looking for visual communications solutions to provide managed video telephony conferencing services to our customers as well as our interoffice communications, we needed a powerful, reliable platform that would support legacy ISDN networks together with IP and V.35 based communications," said Mr. Somphol Chanprasert, Vice President of CAT. "When Telesat brought us the RADVISION solution we were extremely impressed not only with its standard-based multiprotocol functionality but also the substantial features that it delivers."

“In the last decade Video Conferencing System (VCS) and Multipoint Control Units have been embraced as a powerful solution for helping businesses increase their communications, accuracy, effectiveness, and flexibility and, at the same time, save money,” said Mr. Anant Voratitipong, MD of Telesat Corporation Co., Ltd.. “Telesat Corporation Co. is proud to support CAT’s operating system and we believe that this new technology will enable them to continue being the leading force in telecommunications in Thailand.”

About RADVISION’s *viaIP*

RADVISION’s *viaIP* solution is a customizable, scalable array of ports, management solutions, and custom functionality with which customers can design and quickly deploy a highly configured, high scalable visual communications network ideal for each client’s unique needs. With the *viaIP* product line the customer simply chooses the ideal port configuration, management solution and additional applications and the entire solution is delivered in an integrated chassis.
