

FOR IMMEDIATE RELEASE

BROADSOFT AND RADVISION COMPLETE INTEROP, OFFER COMPLEMENTING VIDEO-VOIP 3G MOBILE SOLUTION

Live Demo at 3GSM Exhibits Video Conferencing over 3G to Mobile, Land Phones

BARCELONA, 3GSM World Congress, February 13, 2007 — BroadSoft, Inc., a leading provider of VoIP application software, and RADVISION® (Nasdaq: RVSN), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation networks, today announced a collaborative solution to offer mobile operators the capability to deliver video VoIP services over 3G networks. BroadSoft and RADVISION have completed interoperability testing and are demonstrating their interop solution at the 3GSM World Congress at the RADVISION Booth #1D01 and in BroadSoft's hospitality suites in Hall 4 level 6 #4.6HS38 and 4.6HS50.

BroadSoft and RADVISION interoperability combines BroadSoft's BroadWorks® VoIP application platform with RADVISION's SCOPIA™ Interactive Video Platform to provide video-enabled VoIP services over 3G mobile and landline video phones. The BroadSoft-RADVISION solution allows mobile operators and landline service providers that offer fixed-mobile converged (FMC) services to create new, dynamic service offerings for enterprise and consumer end-users.

The IMS-ready solution allows service providers to offer RADVISION's video conferencing and other interactive applications with BroadSoft's complete range of BroadWorks advanced voice features, such as user-configurable voicemail-to-email, click to dial and find-me-follow-me capabilities. RADVISION's Interactive Video Platform enables exciting interactive wireless multimedia communication services, which combine live and stored video content from different sources of video, including wireless 3G devices, PCs, surveillance cameras and streaming content network sources. BroadSoft's BroadWorks Communicator™ is a multimedia solution that can act as the video client for 3G-to-video calling, bringing a simple GUI-driven, brandable video client to the end-user's PC.

“The live demo at 3GSM demonstrates how seamlessly our SCOPIA Interactive Video Platform works in conjunction with BroadSoft's BroadWorks platform,” said Alon Barnea, General Manager of RADVISION's Mobility & Service Provider Business Unit. “This synergistic offering creates compelling, dynamic new functionalities that enrich video enabled conferencing and other applications over 3G mobile phones, video desk phones and PCs.”

“Marrying the scalability and innumerable features of BroadWorks with RADVISION's Interactive Video Platform, and delivering this solution to mobile phones allows service providers to create new revenue-generating services, including video conferencing, mobile training and more,” said Scott Hoffpauir, CTO for BroadSoft. “Mobile service providers can use this as a killer app in the battle for the enterprise.”

About RADVISION

RADVISION (NASDAQ: RVSN) is the industry's leading provider of market-proven products and technologies for unified visual communications over IP and 3G networks. With its complete set of standards-based video networking infrastructure and developer toolkits for voice, video, data and wireless communications, RADVISION is driving the unified communications evolution by combining the power of video, voice, data and wireless – for high definition video conferencing systems, innovative converged mobile services, and highly scalable video-enabled desktop platforms on IP, 3G and emerging next-generation IMS networks.
