**RADVISION H.323 TOOLKIT PROVIDES FULL PROTECTION AGAINST RECENTLY
ANNOUNCED VOICE AND VIDEO OVER IP VULNERABILITY**

*Products Developed with RADVISION H.323 Toolkit
Are Invulnerable to Denial of Service Attacks*

GLEN ROCK, New Jersey, January 16, 2003 – In response to recent uncertainty in the market about the vulnerability of certain voice and video over IP solutions based on the H.323 protocol, **RADVISION (Nasdaq: RVSN)** today announced that its H.323 developer toolkit includes functionality that enables any product developed with this solution to be invulnerable to this threat. This functionality has been generally available since Q4, 2003 in version 4.2 of its developer toolkit.

RADVISION has also been supplying patches to provide similar protection for the latest releases of H.323 v4.1 and v4.0 of its developer toolkit. Therefore, voice and video over IP products that are based on these versions are not vulnerable to the DoS attacks.

Additionally, all RADVISION video and multimedia conferencing infrastructure products currently shipping today (INVISION and viaIP MCU, gateway, and gatekeeper) are immune to this vulnerability.

A report prepared by the U.K. National Infrastructure Security Co-ordination Center (NISCC) highlights a number of implementation-specific vulnerabilities in the H.323 Protocol which, if exploited, could allow an attacker to create a Denial of Service (DoS) condition.

RADVISION customers who are part of the RADVISION maintenance and support program should be in contact with RADVISION support engineers to receive the appropriate version 4 family version (v4.0 latest version patch, v4.1 latest version patch, or v4.2 current release) that is the most suitable for their products. Customers using version 3 and earlier based H.323 products should contact RADVISION customer support to resolve the specific problem they may have with their legacy products. Developers or customers who are

interested in a deeper discussion on this vulnerability or RADVISION's response are invited to contact RADVISION Customer Support. At the following numbers:
