**TANDBERG AND RADVISION JOIN FORCES TO PROMOTE TRUE STANDARDS-
BASED, END-TO-END INTEROPERABILITY FOR COLLABORATIVE
COMMUNICATION**

*-- Live Demo of End-To-End Interoperability at N+I Tradeshow; Companies' Strengthened
Relationship Demonstrates Commitment to Open Standards,
Multi-Vendor Interoperability --*

LAS VEGAS – Networld & Interop - April 29, 2003 - TANDBERG, a global provider of collaborative communication solutions, and RADVISION (Nasdaq: RVSN), a leading provider of video telephony network infrastructure platforms, today at Networld+Interop (booth # 6755) demonstrated full end-to-end interoperability of their communication platforms, all managed and controlled by TANDBERG's advanced TANDBERG Management Suite (TMS), a powerful software platform for integrating components from multiple vendors into a single streamlined communication system.

This demonstration reaffirms the two companies' strong commitment to working together to develop, and provide customers with fully interoperable, end-to-end, standards-based solutions. Responding to customers who want to combine and take advantage of the best features and capabilities from different vendors, the two companies have been working closely at the technology level to ensure end-to-end, feature-rich solutions that leverage the best-of-breed functionality of TANDBERG and RADVISION platforms.

-- more --

“TANDBERG’s success, and the success of the collaborative communication industry, depends on our ability to give customers what they need and demand – a way to leverage their current investments and infrastructure, and seamlessly integrate solutions in a mixed environment without sacrificing quality or functionality,” said Andrew Miller, vice chairman and CEO of TANDBERG. “By strengthening our relationship with RADVISION, we can continue to deliver on the ACE vision of open standards and interoperability with best-of-breed solutions.”

“Both RADVISION and TANDBERG have played a strong role in making visual communication a powerful, easy-to-install and support component of a multimedia collaboration network,” said Gadi Tamari, CEO of RADVISION. “Through our co-development and interoperability work, including our support of TANDBERG’s new advanced features and powerful conference management system, we continue in this tradition, delivering to the market an end-to-end, standards-based collaborative communication solutions for voice, video and data conferencing – all tightly integrated and fully interoperable.”

The TANDBERG Architecture for the Collaborative-Communications Enterprise (ACE) is a framework for unifying the many essential components required to build an integrated voice, video and data solution. This includes user endpoints, network platforms, distributed common communication software, application management software and value-added services. The core of ACE is the TANDBERG Management Suite (TMS) - the common software platform for integrating components from multiple vendors into a single streamlined system. Using ACE, customers can integrate the best-in-class capabilities from leading vendors into a comprehensive solution for web, voice and video collaboration.

“As we move forward together, TANDBERG and RADVISION share the common vision of an open standards, fully interoperable communication architecture that makes it easy for our channel partners and end users to build and implement the most appropriate collaborative communication solution for their specific requirements, without being locked into a proprietary, non-standard end-to-end solution,” TANDBERG’s Miller added.

-- more --

Specific interoperability features between TANDBERG and RADVISION systems include:

- TANDBERG Management Suite (TMS) manages RADVISION infrastructure, providing a complete end-to-end management solution
- TANDBERG Management Suite schedules conferences on the RADVISION MCU
- TANDBERG uses the RADVISION H.323 stack for IP communications
- RADVISION gateway support TANDBERG DuoVideo
- RADVISION gateway supports TANDBERG Downspeeding
- RADVISION gateway support TANDBERG Natural Video and Native Resolution

In the near future, the companies will also provide the following support:

- The RADVISION MCU will support TANDBERG DuoVideo, Natural Video and Native Resolution.
- The RADVISION ECS will support TANDBERG encryption for point to point calls in routed mode
- RADVISION iVIEW Network Manager will support TANDBERG endpoint basic configuration and integrate with TMS.

About RADVISION

RADVISION Ltd. (Nasdaq: RVSN) is the industry's leading provider of high quality, scalable and easy-to-use products and technologies for videoconferencing, video telephony, and the development of converged voice, video and data over IP and 3G networks. For more information please visit our website at www.radvision.com.

About TANDBERG

TANDBERG is a leading global provider of collaborative communication solutions. The Company designs, develops and markets systems and software for video, voice and data. The TANDBERG Architecture for the Collaborative-Communications Enterprise (ACE) - the industry's first solution architecture that embraces open standards, promotes multi-vendor interoperability, and leverages existing network infrastructure - is a framework for unifying the many essential components required to build an integrated voice, video and data solution. This includes user endpoints, network platforms, distributed common communication software, application management software and value-added services. The core of ACE is the TANDBERG Management Suite (TMS) - the common software platform that manages components from multiple vendors in a single system. The Company provides sales, support and value-added services in more than 90 countries worldwide. TANDBERG has dual headquarters in New York and Norway, and sales and marketing offices in Canada, China, Hong Kong, Japan, Singapore, Spain and the United Kingdom. TANDBERG is publicly traded on the Oslo Stock Exchange under the ticker TAA. Visit www.tandberg.net for more information.
