RADVISION to Report First Quarter 2008 Results on May 1st

Thursday April 3, 7:00 am ET

TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, will report its 2008 first quarter financial results on Thursday, May 1, 2008. The press release will be issued at approximately 8:00 a.m. (Eastern).

A conference call has been scheduled for 9:00 a.m. (Eastern) on that same day.

To access the conference call, please dial 1-877-601-3546 (International dialers

may call +1-210-839-8500) by 8:45 a.m. (Eastern) on May 1st. The passcode

"RADVISION" will be required to access the live conference call. A live webcast

of the conference call also will be available on the Company's website and

archived on the site until the next quarter. Simply click on the following link

or copy it onto your browser:

www.radvision.com/Corporate/Investors/FinancialReports/.

Boaz Raviv, Chief Executive Officer, and Tsipi Kagan, Chief Financial Officer,

will review the quarter's results and discuss the Company's future outlook on

the call. Management also will be available for questions from the investment community.

A PowerPoint presentation highlighting key financial metrics will be available

in the Investor Relations section of the company's website, www.radvision.com.

The presentation will be available beginning at 8:00 a.m. (Eastern) on May 1st

and remain on the site through the second quarter of 2008.

A replay of the call will be available beginning approximately one hour after

the conclusion of the call through 11:59 p.m. (Eastern) on May 8th. To access

the replay, please dial 1-800-879-7630 (International dialers may call

+1-203-369-4000).

About RADVISION

RADVISION (Nasdaq: RVSN - News) is the industry's leading provider of market-proven products and technologies for unified visual communications over IP, 3G and IMS networks. With its complete set of standards-based video networking infrastructure and developer toolkits for voice, video, data and wireless communications, RADVISION is driving the unified evolution by combining the power of video, voice, data and wireless - for high definition video conferencing systems, innovative converged mobile services, and highly scalable video-enabled desktop platforms on IP, 3G and emerging next-generation IMS networks. RADVISION Attains Gold Certified Partner Status in Microsoft Partner Program

Tuesday April 8, 2:00 am ET

RADVISION Further Distinguishes Itself by Earning a Microsoft Competency in ISV/Software Solutions - 3 Years Running

TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION(R) Ltd. (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, today announced it has attained Gold Certified Partner status in the Microsoft Partner Program with a competency in ISV/Software Solutions for the third straight year, recognizing RADVISION's expertise and impact in the technology marketplace. As a Gold Certified Partner, RADVISION has demonstrated expertise with Microsoft technologies and proven ability to meet customers' needs. Microsoft Gold Certified Partners receive a rich set of benefits, including access, training and support, giving them a competitive advantage in the channel.

RADVISION recently introduced its SCOPIA Microsoft Office Communications Server (OCS) 2007 Connector providing advanced video conferencing system interoperability to Microsoft Office Communications Server 2007. The SCOPIA Connector enhances the Microsoft solution providing the capability for Office Communicator users to participate in conferences with standards-based video conferencing systems and devices. The SCOPIA Connector is a simple-to-use, highly flexible tool allowing OCS 2007 users to join a meeting hosted on the SCOPIA Conferencing Platform. With it, Office Communicator desktop users have full interoperability with video conferencing room systems including the latest HD (High Definition) endpoints with continuous presence multipoint video.

"RADVISION has a significant history of support of Microsoft technologies. Our unique expertise in creating solutions enhancing Microsoft's Real Time Communications and Unified Communications initiatives has been recognized with the attainment of Microsoft Gold Certified Partnership status for the third straight year," said Zeev Bikowsky, General Manager Networking Business Unit for RADVISION. "The benefits provided through our Gold Certified Partner status will allow us to continue to enhance the offerings that we provide for customers."

"Customers are looking for partner companies that can bridge the gap between their business demands and technology capabilities," said Allison Watson, vice president of the Worldwide Partner Sales and Marketing Group at Microsoft Corp. "They need to trust in a company that can act as an expert adviser for their long-term strategic technology plans. Microsoft Gold Certified Partners, which have certified expertise and direct training and support from Microsoft, can build a positive customer experience with our technologies. Today, Microsoft recognizes RADVISION as a Gold Certified Partner for demonstrating its expertise providing customer satisfaction using Microsoft products and technology."

As one of the requirements for attaining Gold Certified Partner status, RADVISION had to declare a Microsoft Competency. Microsoft Competencies are designed to help differentiate a partner's capabilities with specific Microsoft technologies to customers looking for a particular type of solution. Each competency has a unique set of requirements and benefits, formulated to accurately represent the specific skills and services that partners bring to the technology industry.

The ISV/Software Solutions Competency recognizes the skill and focus that partners bring to a particular solution set. Microsoft Gold Certified Partners that have obtained this competency have a successful record of developing and marketing packed software based on Microsoft technologies.

<PAGE>

"Solutions competencies are an important way for Microsoft to better enable independent software vendors (ISVs) to meet customer needs," said Sanjay Parthasarathy, corporate vice president of the Developer & Platform Evangelism Group at Microsoft. "They allow ISVs to keep and win customers through their deep knowledge of solutions-based Microsoft platform technologies. Microsoft has a long history of working closely with ISV partners to help them deliver compelling solutions and applications to our mutual customers, and the Microsoft Competencies are an important step in continuing to enhance vital relationships with ISVs worldwide."

The Microsoft Partner Program was launched in October 2003 and represents Microsoft's ongoing commitment to the success of partners worldwide. The program offers a single, integrated partnering framework that recognizes partner expertise, rewards the total impact that partners have in the technology marketplace, and delivers more value to help partners' businesses be successful.

About RADVISION

RADVISION (Nasdaq: RVSN - News) is the industry's leading provider of market-proven products and technologies for unified visual communications over IP, 3G and IMS networks. RADVISION to Showcase Advanced Video Solutions and Interoperability for Unified Communications at Interop Las Vegas 2008

Tuesday April 29, 9:00 am ET

RADVISION SCOPIA Technology Demonstrated At the Core of Video-enabled Unified Communications, IBM Lotus Solution Enhanced for Lotus Notes and Domino

LAS VEGAS & TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION(R) Ltd. (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, today announced that from April 29th - May 1st at the Interop exhibition in Las Vegas, RADVISION will demonstrate multiple technology integrations with its unified communications partners showcasing the power of unified visual communications with RADVISION technology at the core.

At Interop booth 1577, RADVISION will be demonstrating:

- o IBM Lotus Sametime with multiparty audio and video from the SCOPIA Conferencing Platform
- o Microsoft Office Communications Server 2007 video conferencing connectivity via SCOPIA
- o Cisco Unified Videoconferencing powered by SCOPIA technology
- o Interoperability between the IBM, Microsoft, and Cisco solutions in addition to HD (high definition) room based video conferencing and video telephony

IBM Lotus Sametime with multiparty audio and video from the SCOPIA Conferencing Platform

RADVISION's SCOPIA Conferencing Platform with SCOPIA Desktop brings advanced conferencing capability to IBM's next generation unified communications and collaboration platform enhancing the instant messaging and conferencing

capabilities of Lotus Sametime by enabling users to create and initiate multiparty audio and video conferences directly from within Lotus Sametime.

New today are enhancements to the solution providing scheduling and directory integration with IBM Lotus Notes and Lotus Domino. Now users can schedule SCOPIA hosted meetings from Lotus Notes in addition to having their username and password credentials authenticated against Lotus Domino.

Microsoft Office Communications Server 2007 video conferencing connectivity via SCOPIA

The SCOPIA Office Communications Server (OCS) 2007 Connector enhances the latest Microsoft unified communications offering providing the capability for Office Communicator users to participate in conferences with standards-based video conferencing systems and devices. The SCOPIA Connector is a simple to use, highly flexible tool allowing OCS 2007 users to join a meeting hosted on the SCOPIA Conferencing Platform using their native Office Communicator client. Now Office Communicator desktop users have full interoperability with video conferencing room systems including the latest high definition endpoints with continuous presence multipoint video.

Cisco Unified Videoconferencing powered by SCOPIA technology

The Cisco Unified Videoconferencing System is integrated into Cisco Unified Communications to enable connectivity with a broad range of room and desktop video systems and communications environments. RADVISION provides the infrastructure for Cisco Unified Videoconferencing, including MCUs, Gateways and

software for setting up and managing video sessions. Cisco Unified Videoconferencing includes desktop video that extends the capabilities of the Cisco Unified Videoconferencing MCU to remote users with a free, Web-based client that includes H.239 data collaboration, embedded firewall and NAT traversal and conference streaming. This provides the same continuous presence and data sharing capabilities as video conferencing room systems extending their reach and impact.

"Enterprises today have a broad array of options available to them for communications including: unified communications platforms from the major vendors, telepresence systems, HD room systems, desktop video and video telephony - with most enterprises having some combination of these. Natively, they don't easily interoperate with each other and increase the risk of creating islands of communication," said Zeev Bikowsky, General Manager Networking Business Unit for RADVISION. "We invite you to visit us at Interop where we will show interoperability between the IBM, Microsoft, and Cisco applications including high definition room-based video conferencing and video telephony. RADVISION's SCOPIA technology provides users the freedom to choose their preferred application or use them all."

About RADVISION

RADVISION Presented with Prestigious Industry Award for
Product Differentiation and Innovation

Tuesday May 20, 8:00 am ET

Frost & Sullivan Lauds RADVISION's Product Strength and Market
Differentiation
Strategies in the Videoconferencing Infrastructure Market

TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION(R) Ltd. (Nasdaq: RVSN -
News), a
leading provider of video network infrastructure and developer tools
for unified
visual communications over IP, 3G, and emerging next-generation IMS
networks,
today announced that the company has been presented with the
prestigious 2008
North American Frost & Sullivan Award for Product Differentiation
Innovation.
This Award is presented each year by Frost and Sullivan to the company
that has
best demonstrated the ability to develop products that allow it to
differentiate
from competing vendors and products.

RADVISION received this award in recognition of the company
successfully
leveraging its existing technology assets to introduce SCOPIA Desktop
that in
combination with SCOPIA multi-point control unit (MCU) and the rest of
the
SCOPIA infrastructure suite, is allowing RADVISION to set itself apart
in the
industry.

Unified Communications is driving the deployment of video conferencing
throughout organizations from the conference room, to the desktop and
to mobile
workers. The SCOPIA Conferencing Platform supports all of those
environments
including next generation high definition (HD) endpoints, standard
definition
(SD) endpoints and through SCOPIA Desktop to the remote and mobile
worker.
SCOPIA Desktop capabilities have also been integrated into Microsoft's
Office
Communications Server 2007 and IBM Lotus Sametime collaboration
solutions
extending the capabilities of those solutions.

"RADVISION's SCOPIA Conferencing Platform and the introduction of SCOPIA Desktop come at a critical time," said Roopam Jain, Frost & Sullivan's Principal Analyst - Conferencing & Collaboration. "Close to a hundred million U.S. workers are expected to telework by 2010 and companies are continually looking for ways to improve remote employee communication and collaboration and bring these teleworkers closer into the corporate culture. The SCOPIA Desktop solution achieves that with a unique blend of audio, video and data capabilities."

"To efficiently meet the needs of today's enterprise requires a standards based solution that supports the existing install base of video devices and one that extends videoconferencing beyond them to remote workers," said Boaz Raviv, RADVISION's CEO. "The solution has to have freely distributable software clients, have the capability to traverse firewalls, has to be easy to install and use and provide data collaboration and video features that are compatible with other video conferencing devices being used by the company. RADVISION has addressed all those requirements with the SCOPIA Conferencing Platform and SCOPIA Desktop."

About RADVISION

RADVISION (Nasdaq: RVSN - News) is the industry's leading provider of market-proven products and technologies for unified visual communications over IP, 3G and IMS networks. With its complete set of standards-based video networking infrastructure and developer toolkits for voice, video, data and wireless communications, RADVISION is driving the unified communications evolution by combining the power of video, voice, data and wireless - for high definition video conferencing systems, innovative converged mobile services, and highly scalable video-enabled desktop platforms on IP, 3G and emerging next-generation IMS networks. RADVISION Names Adi Sfadia as New Chief Financial Officer

Wednesday June 11, 7:00 am ET

TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, announced today that Adi Sfadia will succeed Tsipi Kagan as Chief Financial Officer effective July 30. Mr. Sfadia had served as Vice President of Finance for RADVISION until he joined Alvarion Ltd., a WiMAX and wireless broadband solutions provider, in that post in January 2008. Ms. Kagan's plan to leave RADVISION was announced on May 1.

Mr. Sfadia, 38, joined RADVISION in 2004 as corporate controller. Prior to joining RADVISION, Mr. Sfadia served in several senior financial positions in Israeli companies, where he gained wide financial and managerial experience. Mr. Sfadia spent five years in public accounting with Ernst & Young Israel. Mr. Sfadia holds a BA in Business Administration and an MBA, magna cum laude from The College of Management in Tel Aviv and Rishon Letzion and he is a Certified Public Accountant.

Boaz Raviv, Chief Executive Officer, commented: "We are very pleased that Adi Sfadia will return to RADVISION as our Chief Financial Officer. His experience with us will ensure a seamless transition and his strong background in finance makes him well suited to lead our finance group. We welcome him to our management team and look forward to his contribution in building RADVISION's future."

About RADVISION

RADVISION (Nasdaq: RVSN - News) is the industry's leading provider of market-proven products and technologies for unified visual communications over IP, 3G and IMS networks. With its complete set of standards-based video

networking infrastructure and developer toolkits for voice, video, data and wireless communications, RADVISION is driving the unified communications evolution by combining the power of video, voice, data and wireless - for high definition video conferencing systems, innovative converged mobile services, and highly scalable video-enabled desktop platforms on IP, 3G and emerging next-generation IMS networks. RADVISION Enhances the SCOPIA Conferencing Platform with High Definition Desktop Video, Conference Recording, and Enhanced Integration into IBM Lotus Software

Wednesday June 18, 8:00 am ET

RADVISION's SCOPIA Conferencing Platform, Winner of the 2008 Frost & Sullivan Award for Product Differentiation Innovation, Further Sets Itself Apart In Meeting the Evolving Needs of the Unified Communications Market

LAS VEGAS & TEL AVIV, Israel--(BUSINESS WIRE)--RADVISION(R) Ltd. (Nasdaq: RVSN - News), a leading provider of video network infrastructure and developer tools for unified visual communications over IP, 3G, and emerging next-generation IMS networks, today announced major advancements to its award winning SCOPIA Conferencing Platform. Available as a software upgrade to existing SCOPIA deployments, Version 5.6 delivers significant enhancements across the entire SCOPIA platform including the SCOPIA MCU, SCOPIA Desktop, and the iVIEW Management Suite. Enhancements include features for enhanced video quality including desktop HD video, ease of use and integration into the IBM Lotus unified communications platform.

High Definition (HD) Desktop Video

Version 5.6 introduces High Definition video conferencing to the desktop via the SCOPIA Desktop browser-based plug-in. Now desktop users can receive and view a full 16:9 widescreen HD 720p image right at their desktop significantly enhancing the user experience. SCOPIA Desktop users can now receive 720p images while sending 480p or CIF images preserving bandwidth and processing power. Receiving a very high quality HD image provides a striking improvement over the standard resolution video quality most other desktop systems offer.

Conference Recording and Content Management

As video is more widely used through unified communications product offerings, users have increased their requirements from not only interactive and streaming capabilities but to also be able to record, archive, and view their meetings, classes or training sessions. Version 5.6 enhances the existing streaming capabilities of the SCOPIA platform with the introduction of recording, playback and content management. This new capability includes recording of the audio, video and H.239 data collaboration. Recorded content can be easily organized and managed providing for simple user access and time-shifted playback and review on a standard PC. Access can be controlled by enterprise directory credentials for security of the content.

SCOPIA at the Core of Video Enabled Unified Communications Solutions

RADVISION's SCOPIA Version 5.6 continues its leading position at the core of video enabled unified communications with enhanced integration into IBM Lotus Sametime. The SCOPIA platform currently provides multiparty audio and video support for IBM Lotus Sametime, standards-based video conferencing connectivity for Microsoft Office Communicator 2007; and support for Cisco Unified Videoconferencing powered by SCOPIA technology. V5.6 enhances the SCOPIA solution to provide support for Domino directory and Notes scheduling; providing easier management and access through IBM Lotus Sametime.

Additional SCOPIA Version 5.6 Enhancements Include:

- o A system-wide video IVR allowing simple creation and selection of video conferences through a video conferencing room system including when conferences span multiple MCUs.
- o Data collaboration with annotation for SCOPIA Desktop including H.239 compatibility allowing annotations to be visible on H.239 equipped room systems.

In May of this year, RADVISION was presented with the prestigious 2008 North American Frost & Sullivan Award for Product Differentiation Innovation for the SCOPIA Conferencing Platform. This was in recognition of market leading support for standard and high definition video, integration of desktop conferencing and advanced network management. The enhancements in V5.6 further extend the capabilities of the SCOPIA platform to provide an innovative and differentiated solution.

"RADVISION continues to listen and respond to customer requirements with features that meet the evolving visual requirements of the unified communication market," said Krithi Rao Industry Analyst - Unified Communications for Frost & Sullivan. "Version 5.6's delivery of desktop HD, recording and further integration with unified communication platforms, delivers the differentiation and innovation we have come to expect from the SCOPIA unified communications platform."

"The enterprise market is changing rapidly with globalization of customers and suppliers, a more dispersed workforce and increased cost of travel. There has never been more of a need for simple cost effective conferencing and collaboration," said Boaz Raviv, CEO of RADVISION. "We are providing our customers with solutions that make video conferencing simple by integrating into the market leading unified communication applications and a better experience by providing high definition to the desktop users."

RADVISION will be exhibiting SCOPIA V5.6, including High Definition (HD) SCOPIA Desktop, conference recording, and unified communications integration with IBM and Microsoft solutions at the InfoComm Exhibition in Las Vegas, June 18 - 20, Las Vegas Convention Center, booth C3387.
